Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A;Accession: JN0861
A;Nolecule type: protein
A;Residues: 1-6 <MAT>
A;Experimental source: liver
C;Comment: The carboxyl end is essential for the protein's expression of angiotensin I-cc
C;Superfamily: bradykinin-potentiating peptide
C;Superfamily: bradykinin-potentiating peptide
C;Keywords: angiotensin-converting enzyme inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                         J. Biol. Chem. 261:16704-16713(1986).

-!- FUNCTION: Exhibits unusual shark repellent and surfactant properties. Forms voltage-dependent, ion-permeable channels in membranes. At high concentration causes cell membrane lysis.
-!- SUBGELLUIR: Monomer. In aqueous solution exists as a tetramer.
-!- SUBCELLUIR! LOCATION: Secreted.
-!- SIMILARITY: Belongs to the pardaxin family.
Direct protein sequencing; Toxin.
                                                                                                                        30-MAY-2000 (Rel. 39, Last sequence update)

AAB30895-98 selectively bind to normal cardiac endothelium. The specification describes a chimeric molecule comprising an angiogenic factor linked to a targeting molecule that specifically binds to a vascular endothelium. The chimeric molecule are useful for treatment of peripheral vascular or cardiovascular diseases. Specifically, they are useful for inducing or inhibiting angiogenesis, for increasing cardiac neovascularisation in ischemic tissue in the peripheral vascular system

The present invention provides a number of heart homing peptides which selectively home to cardiac tissue. These can be used in the treatment of cardiovascular and ischaemic diseases, such as atherosclerosis, thrombosis, restenosis, vasculitis, atherosclerotic aneurysms, myocardial hypertrophy, congenital heart diseases, ischaemic heart disease and anginas, acquired valvular/endocardial diseases, primary myocardial diseases, cardiac tumours and arrhythmias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel heart homing peptide that selectively homes to normal ischemic and cardiac tissue useful for targeting ischemic tissues for treating ischemic and cardiovascular diseases such as atherosclerosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Targetting peptide selective for human organ, tissue or cell type #50.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; cytostatic; antiinflammatory; antidiabetic; cardiovascular; immunomodulator; antibacterial; antiviral, gene therapy; cancer; arthritis; diabetes; inflammatory disease; atherosclerosis; autoimmune disease; bacterial infection; viral infection;

                                                                                                                                                       The invention describes an isolated peptide of 100 amino acids or less in size. The peptide is useful for treating a disease state, e.g. cancer, arthritis, diabetes, inflammatory disease, atherosclerosis, autoimmune disease, bacterial infection, viral infection, cardiovascular disease or degenerative disease. This sequence represents a human targeting peptide selective for human organs, tissues or cell types
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New peptide ligands that bind specific orphan protein domains and related nucleic acid - and methods for identifying them in random peptide libraries, useful for treatment of neurological disease, motility

```
peptide (NBP), and represents a peptide of the invention. This sequence was identified using the method of the invention. This sequence was identified using the method of the invention for identifying proteins that interact with a protein binding domain (orphan protein domain, OPD) of a first protein (Protein interaction network, PIN) comprises: (a) of a first protein (Protein interaction network, PIN) comprises: (a) creening a random peptide library of transformed cells, each containing a plasmid that includes a lacO binding site, an encoding a fusion protein (FP) of lac repressor DNA binding protein and specific peptide (the operation of plasmids and plasmids encoding a peptide that binds to OPD contexted with OPD and plasmids encoding a peptide that binds to OPD contexted with OPD and plasmids encoding a peptide that binds to OPD contexted with OPD and plasmids are sequenced, and nucleic acid and protein databases scanned to identify proteins that contain the peptide. These peptides and peptide ligands identified by the ligand detection system, are used for treatment of neurological disease, motility disorders or muscular dystrophy (e.g. stroke, amyotrophic lateral sclerosis, Huttington's, Parkinson's or Alzheimer's diseases, Duchenne muscular dystrophy or irritable bowel syndemes). The peptides act by inhibiting interaction between an OPD and proteins to which it normally binds, so interaction proteins and as molecular labels for specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Labelled functional surrogate of an analyte - useful as competitor molecule in affinity assays, esp. for detecting large macromolecules such

This sequence represents a peptide motif derived from ferritin which is important for selective binding affinity. Peptides containing motifs such as this may be used as functional surrogates in the conjugate of the invention. The novel labelled conjugate conjugate of the comparises at least one label attached to a functional surrogate of an analyte of interest. The surrogate is capable of competing effectively with the analyte for a limiting amount of an affinity receptor for the analyte. The conjugate exhibits an activity that is altered upon interaction with the affinity receptor and this activity can be measured and related to the amount of the analyte present in a sample. Functional surrogates such as this have an immunoreactive group that allows the surrogate such as this have an immunoreactive group that allows the surrogate such as this have an immunoreactive group that allows the surrogate such as this have an immunoreactive group that allows the surrogate such as this have an immunoreactive group that allows the surrogate such as this for despited for a limiting amount of its affinity assays. They can be labelled for use in standard competitive affinity assays to polypeptides, polysaccharides, polynucleotides, glycoproteins and lipid containing macromolecules, as well as small happens. Typical diagnostic containing macromolecules, as well as small happens the clated to fertility-pregnancy or analytes associated with infectious disease. In particular, the assays are useful for detecting immunorable, the infectious disease. In particular, human growth hormone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              immunoglobulin E, prolactin, parathyroid hormone, human placental lactogen, hepatitis antigens or antibodies against them, human chorionic gonadotropin, human luteinising hormone, cytomegalovirus, Chlamydia, Streptococcus a, rubella, toxoplasma, herpes virus, DK-MB, myoglobin, myosin light chain, troponin, carcincembryonic antigen, alphafetoprotein, prostate-specific antigen and CA125 (a tumour marker).                                                                                                                                                            The present invention describes peptides that selectively home to a tissue or organ. The peptides can be used for identifying an organ or tissue, for identifying a target molecule expressed by an organ or tissue or for treating an organ or tissue pathology, where the organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, ovary, adrenal gland, liver, and lymph node. The peptide bind to the membrane dipeptidase (MDP). AAY48618 to AAY49066 represent sequences which are used in the exemplification of the present invention. (Updated on 20-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polypeptide that interacts with a 95 kDa post-synaptic density protein 95/Discs large/ZO-1 (PDZ) domain, useful for producing, selecting and identifying PDZ domain binding peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         95 kDa poet-synaptic density protein/Discs large/ZO-1 domain, PSD-95/Discs large/ZO-1 domain, PDZ domain; fusion protein; ppage coat protein; PDZ domain binding peptide; cytostatic; nootropic; neuroprotective; antiparkinsonian; neuroleptic; antitumour; immunosuppressive; pulmonary; muscular; gene therapy; rickettsial disease; murine typhus; chronic myeloid leukaemia; Allaheimer's disease; neurological disorder; Parkinson's disease; schizophrenia, X-linked autoimmune enteropathy; tsutsugamushi disease; facioscapulohumeral muscular dystrophy; late onset demyelinating disease; Usher syndrome type 1; USH1; nitric oxide-mediated tissue damage; tumour;
                                                                       New peptides which selectively home to organs or tissues, used for, e. identifying target ligands and for therapy of pathological conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The second polypeptide comprises the ligand (7) Screening for a substance that modulates interaction between a PDZ domain polypeptide and a substance that modulates interaction between a PDZ domain polypeptide and a molecule known to bind to the PDZ domain of the polypeptide; and (8) screening (M) for a substance that inhibits binding of a PDZ domain of the polypeptide to a molecule known to bind to the PDZ domain of the polypeptide to a molecule known to bind to the PDZ domain of the polypeptide (I) has cytostatic, notropic, neuroprotective, antiparkinsonian, neuroleptic, antitumosuppressive, pulmonary and muscular activities, and can be used in gene therapy. The library of a fusion protein (II) is useful for producing a PDZ domain binding peptides in crecombinant host cells. The library of (II) is also useful for compinant host cells. The library of (II) is also useful for identifying a PDZ domain binding peptides in crecombinant host cells. The library of (II) is also useful for gene therapy, and in class of diseases. (I) and PN are useful for treating a subject at crisk of a disorder or having a disorder associated with aberrant PDZP, Crisk of a disorder or having a disorder associated with aberrant PDZP, crisk of a disorder or having a rekettsial diseases, murine typhus, chronic myeloid leukaemia, Alzheimer's disease, murine typhus, contracting as Parkinson's disease and schizophenia, X-linked autoingmune
                               The present invention describes an isolated polypeptide (I) that interacts with a 95 kpa post-synaptic density protein (PSD-95)/Discs large/ZO-1 (PDZ) domain. Also described: (I) a fusion protein (II) comprising a portion of a phage coat protein bonded through its carboxylermins, optionally through a peptide linker, to a PDZ domain binding peptide, where the peptide contains 3-20 maino acid residues; (2) a library of (II), where the fusion proteins in the library comprise a number of PDZ domain binding peptides; (3) an assay for a PDZ domain binding peptide that binds to the same epitope as (I), or that competes for binding to a PDZ domain with (I); (5) a polypeptide that binds to the same epitope as (I), or that competes for binding to a PDZ domain with (I); (5) a polypeptide interaction, by contacting a mixture comprising a first and a second polypeptide with an inhibitor of interaction between a PDZ domain and its ligand, where the first polypeptide comprises the PDZ domain and the contact of the pDZ domain and the plant of the plant of the plant of the pDZ domain and the plant of the pDZ domain and the plant of the plant of the plant of the pDZ domain and the plant of the plant 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           distributions of unreade and solution that the content of the cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0; Gaps

The present sequence represents a kojiblose phosphorylase peptide from Thermoanaerobium brockii. Kojiblose phosphorylase hydrolyses kojiblose in the presence of inorganic phosphoric acid and/or its salt to form all the presence of inorganic phosphoric acid and/or its salt. Saccharide compositions, containing a D-glucosyl-transferred saccharide, are used in e.g., foods, animal feeds, beverages, cosmetics, pharmaceuticals or tobacco as sweeteners, taste improvers, osmosis regulators, growth promoters for bildi bacteria and promoters of mineral absorption. They may also be used to stabilise pharmaceuticals e.g. cytokines, hormones, vacchines, antibictics, enzymes and microorganisms. Kojiblose phosphorylase is used to produce kojiblose by contacting, in the presence of Pi, with maltose and maltose phosphorylase (MP) on maltose or trehalose phosphorylase (TP) on trehalose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      harmonises with substances which are sour, bitter, acidic, salty, astringent and delicious and is acid and heat tolerant. The high thermal stability of kojibiose phosphorylase makes possible large scale, relatively inexpensive production of D-glucosyl transferred saccharides which are normally difficult to produce. New catalytic antibodies able to decompose cocaine, single-chain analogues - used to treat cocaine overdose and addiction, required in far smaller doses than antibodies that antagonise cocaine by simply binding.
                                                                                                     New catalytic antibodies able to decompose cocaine, single-chain analogues - used to treat cocaine overdose and addiction, required in far smaller doses than antibodies that antagonise cocaine by simply binding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAW39860-62 represent the sequences of the heavy chain complementarity determining regions (CDRs) of the catalytic antibody 15A10, which is able to degrade cocaine. A series of cocaine transition state analogues (TSAs)
                                                                                                                                                                                                                                     AAW39872-74 represent the sequences of the heavy chain complementarity determining regions (CDRs) of a catalytic antibody which is capable of degrading occaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. These antibodies were found to have CDRs of the present sequence. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo concentration that can be achieved)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Variable domain, lambda light chain, catalytic antibody, degradation, cocaine, cocaine transition state analogue; TSA; benzoic acid, phenyl cocaine; immunogenic conjugate; reduction; cocaine; treatment;

A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The 19G8 antibody was identified using TSA1, which is an immunogenic conjugate of a phosphate monoester transition state analogue. Antibody 19G8 has a per minute Kcat of 0.091. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo concentration that can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                          in far
                                                                                                                                                                                                                                                                              New catalytic antibodies able to decompose cocaine, single-chain analogues - used to treat cocaine overdose and addiction, required in far smaller doses than antibodies that antagonise cocaine by simply binding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Heavy chain CDR3 of a catalytic antibody capable of degrading cocaine.

ò
were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The 15A10 antibody was identified using TSA1, which is an immunogenic conjugate of a phosphate monoester transition state analogue. Antibody 15A10 has a per minute Kcat of 2.3. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo concentration that can be achieved)
                                                                                                                                                                                                                                                                                                                                                                                     Variable domain, lambda light chain, catalytic antibody, degradation, cocaine, cocaine transition state analogue; TSA; benzoic acid; phenyl cocaine; immunogenic conjugate, reduction, cocaine; treatment;

It is used for the development of substances active against enveloped pathogens such as viruses from the family Bundyaviridae. Its selection involved the reaction of a ligand library with the bound target pathogen and the pathogen bound ligands are subjected to competitive affinity-elution with at least one neutralising substance. The method is useful for comparative drug design to provide therapeutically active, protective and/or prophylactic substances and developing combinational therapies as well as for pathogen diagnostics. The method also identifies "leader molecules", which not only have great affinity, but also mimic the functions of known neutralising substances. (Updated on 27-NUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                           Selection of target pathogen inhibiting substances - useful for comparative drug design to provide therapeutically active, protective and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

AAW39854-56 represent the sequences of the heavy chain complementarity determining regions (CDRs) of the catalytic antibody 9A3, which is able to degrade cocaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The 9A3 antibody was identified using TSA1, which is an immunogenic conjugate of a phosphate monoester transition state analogue. Antibody 9A3 has a per minute Kcat of 0.015. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo concentration that can be

Sequence 7 AA;

achieved)

New catalytic antibodies able to decompose cocaine, single-chain analogues - used to treat cocaine overdose and addiction, required in far smaller doses than antibodies that antagonise cocaine by simply binding.

Estradiol mimotope peptide #24

21-MAY-2002 (first entry)

```
The invention relates to an anti-trkC agonist monoclonal antibody which shows no significant cross-reactivity with trkA or trkB, and recognizes an epitope in domain 5 of trkC. The antibodies of the invention are effective in the treatment of cisplatin- or pyridoxine-induced neuropathy, peripheral neuropathy, diabetic neuropathy and large-fibre sensory neuropathy, neurodegenerative disease including amyotrophic lateral sclerosis, nerve cell injuries, disorders of insufficient blood cells such as leukopaenia including eosinopaenia, basopaenia, lateral sclerosis, monocytopaenia, neutropaenia, basopaenia, parkinson's disease, Huntington's disease and tumours. The sequences are also useful for inducing angiogenesis for treating wounds, ulcers and diabetic complications of sickle cell disease, for treating cardiac ischaemia and cerebrovascular disorders and in the diagnosis of diseases involving cellular degeneration. Sequences AAUB1229-AAUB1284 represent chamant and mouse anti-trkC agonist monoclonal antibodies and antibody
                                                                                                                                                trkA, trkB, cisplatin-induced neuropathy; pyridoxine-induced neuropathy; peripheral neuropathy; diabetic neuropathy; neurodegenerative disease; large-fibre sensory neuropathy; amyotrophic lateral sclerosis; tumour; nerve cell injury; blood cell disorder; leukopaenia; eosinopaenia; wound; basopaenia; lymphopaenia; monocytopaenia; neutropaenia; ancer; alcer; Alzheimer's disease; Parkinson's disease; Huntington's disease; diabetes; sickle cell disease; cardiac ischaemia; cerebrovascular disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel anti-trkC agonist monoclonal antibody useful for treating neurodegenerative disease, shows no significant cross-reactivity with trkA/trkB, and recognizes epitope in domain 5 of trkC.
                                                                                                                              anti-trkC agonist monoclonal antibody; trkC; antibody;
                                                                                  Human trkC antibody heavy chain CDR1 of variable region #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Presta LG, Shelton DL;

The invention relates to a purified peptide mimotope capable of binding specifically to an antibody specific to estradiol. Also included are a solid support having immobilised (releasably) or non-releasably) peptide mimotopes, an immunoasay test device for the detection of estradiol in the sample, comprising the mimotopes and an antibody capable of binding specifically to the mimotopes to generate a detectable signal and an isolated nucleic acid encoding the peptide mimotopes. The mimotope is selected nucleic acid encoding the peptide mimotopes. The mimotope is estrone-3-glucuronide in a sample which is urine or serum sample to be tested and is also utilised in an immunoasay test device, and further an be used as immunoasa. The mimotope be used to construct new, or improve the performance of old, immunoasay test formats and devices. They can, for example, be utilised essentially to tune the signal in conventional displacement assays for the detection of estradiol. The mimotope can be bound directly to certain assay surfaces which are conventional displacement assays for the detection of estradiol. The mimotope is capable of being bound to the antigen-binding molecule. The mimotope is capable of being bound to the antigen-binding signal encoule. The mimotope is capable of being bound to the antigen-binding high enough affinity) that when used in an immunoassay, it provides a custor in result). The present sequence is a peptide mimotopes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

A;Title: Isolation and characterization of angiotensin I-converting enzyme inhibitory pe A;Reference number: JN0859; MUID:94080036; PMID:7764272
A;Accession: JN0861
A;Molecule type: protein
A;Residues: 1-6 <MAT-
A;Experimental source: liver
C;Comment: The carboxyl and is essential for the protein's expression of angiotensin I-C
C;Superfamily: bradykinin-potentiating peptide
C;Keywords: angiotensin-converting enzyme inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  peptidyl-dipeptidase A inhibitory peptide C107 - striped bonito

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      netronogram.

1- SUBCELLUAR LOCATION: Secreted.

1- TISSUE SPECIFICITY: Limited to neuronal cell bodies, neuronal processes and sinus gland.

1- MASS SPECTROMETRY: NM=801.5; METHOD=MALDI; RANGE=1-6; NOTE=Ref.1.

1- SIMILARITY: Belongs to the NPY family.

1- SIMILARITY: Belongs to the NPY family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAB30895-99 represent targeting molecules, which are used to produce the chimeric molecules of the invention. AAB30895-98 selectively bind to normal cardiac endothelium. The specification describes a chimeric molecule comprising an angiogenic factor linked to a targeting molecule that specifically binds to a vascular endothelium. The chimeric molecule are useful for treatment of peripheral vascular or cardiovascular diseases. Specifically, they are useful for inducing or inhibiting angiogenesis, for increasing cardiac neovascularisation in ischemic tissue in the peripheral vascular system
                                                                                                                                                                                                                                                                                                                                                                                                                    New chimeric molecules having an angiogenic factor linked to a targeting molecule that binds to a vascular endothelium, useful for increasing cardiac neovascularization, or treating peripheral vascular and

```

```
The present invention provides a number of heart homing peptides which selectively home to cardiac tissue. These can be used in the treatment of cardiovascular and ischaemic diseases, such as atherosclerosis. thrombosis, restenosis, vasculitis, atherosclerotic aneurysms, myocardial hypertrophy, congenital heart diseases, ischaemic heart disease and anginas, acquired valvular/endocardial diseases, primary myocardial diseases, cardiac tumours and arrhychmias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel heart homing peptide that selectively homes to normal ischemic and cardiac tissue useful for targeting ischemic tissues for treating ischemic and cardiovascular diseases such as atherosclerosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cyclopeptide; vascular endothelial growth factor; VEGF; KDR receptor; angiogenesis; tumour growth; metastasis development; ischaemia; vascular eye disease; chronic inflammatory disease; tissue regeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                             The present sequence represents a cyclopeptide, which contains a peptide (ABB77919) which is based on a partial sequence of vascular endothelial growth factor (VBCP). The arginine and glycine residues of ABB77919 are preferably linked by a chain of one or more compounds selected from natural or synthetic amino acids and organic compounds have a carboxy group and an optionally substituted amino group. The cyclopeptides of the invention have high affinity for the KDR receptor of VBGF, and can be used to inhibit or promote angiogenesis is potentially useful in combating tumour growth, metastasis development, ischaemia, vascular eye diseases and chronic inflammatory diseases; and promotion of angiogenesis is potentially useful in promotion of implanted biomaterials
                                                                  New cyclopeptides containing heptapeptide moiety acting as ligand for the KDR receptor of vascular endothelial growth factor (VEGF), useful, optionally in supported form, as angiogenesis inhibitors or activators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cyclopeptide; vascular endothelial growth factor; VEGF; KDR receptor; angiogenesis; tumour growth; metastasis development; ischaemia; vascular eye disease; chronic inflammatory disease; tissue regeneration.

The arginine and glycine residues of ABB77919 are preferably linked by a chain of one or more compounds selected from natural or synthetic amino acids and organic compounds have a carboxy group and an optionally substituted amino group. The cyclopeptides of the invention have high affinity for the KDR receptor of VEGF. The cyclopeptides mediate in angiogenesis by bonding to the KDR receptor of VEGF, and can be used to inhibit or promote angiogenesis. Inhibition of angiogenesis is potentially useful in combating tumour growth, metastasis development, ischemia, vascular eye diseases and chronic inflammatory promoting tissue regeneration and colonization of implanted biomaterials such as bone substitutes. The present sequence represents a peptide, include, in the control of angiogenesis is potentially useful in promotion of angiogenesis is spetentially useful in promotion of angiogenesis is potentially useful in promotion as bone substitutes.
                                                                                                                                                            New cyclopeptides containing heptapeptide moiety acting as ligand for the KDR receptor of vascular endothelial growth factor (VEGF), useful, optionally in supported form, as angiogenesis inhibitors or activators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New cyclopeptides containing heptapeptide moiety acting as ligand for the KDR receptor of vascular endothelial growth factor (VEGF), useful, optionally in supported form, as angiogenesis inhibitors or activators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cyclopeptide; vascular endothelial growth factor; VEGF; KDR receptor; angiogenesis; tumour growth; metastasis development; ischaemia; vascular eye disease; chronic inflammatory disease; tissue regeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                   The specification describes cyclopeptides, which contain a peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0; Indels

```
The present sequence represents a cyclopeptide, which is based on a partial sequence of vascular endothelial growth factor (VEGF). The arginine and glycine residues of the present peptide are preferably linked by a chain of one or more compounds selected from natural or synthetic aminoacids and organic compounds have a carboxy group and notionally substituted amino group. The cyclopeptides of the invention have high affinity for the KDR receptor of VEGF. The cyclopeptides mediate in angiogenesis by bonding to the KDR receptor of VEGF, and can be used to inhibit or promote angiogenesis. Inhibition of angiogenesis is potentially useful in combating tumour growth, metastasis development, ischaemia, vascular eye diseases and chronic inflammatory diseases; and promotion of angiogenesis is potentially useful in promoting tissue regeneration and colonization of implanted biomaterials such as bone
                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New cyclopeptides containing heptapeptide moiety acting as ligand for the KDR receptor of vascular endothelial growth factor (VEGF), useful, optionally in supported form, as angiogenesis inhibitors or activators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                angiogenesis; tumour growth; metastasis development; ischaemia; vascular eye disease; chronic inflammatory disease; tissue regeneration.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     05-APR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABB77942;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 6
d
```

The specification describes cyclopeptides, which contain a peptide (ABB77919) which is based on a partial sequence of vascular endothelial growth factor (VEGF). The arginine and glycine residues of ABB77919 are

```
ö
          natural or synthetic amino acids and organic compounds have a carboxy group and an optionally substituted amino group. The cyclopeptides of the invention have high affinity for the KDR receptor of VEGF. The cyclopeptides mediate in angiogenesis by bonding to the KDR receptor of VEGF, and can be used to inhibit or promote angiogenesis. Inhibition of angiogenesis is potentially useful in combating tumour growth, necestcas development, ischaemia, vascular eye diseases and chronic inflammatory diseases; and promotion of angiogenesis is potentially useful in promotion of substitutes. The present sequence represents a peptide, which is also base don VEGF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New cyclopeptides containing heptapeptide moiety acting as ligand for the KDR receptor of vascular endothelial growth factor (VEGF), useful, optionally in supported form, as angiogenesis inhibitors or activators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cyclopeptide; vascular endothelial growth factor; VEGF; KDR receptor; angiogenesis; tumour growth; metastasis development; ischaemia; vascular eye disease; chronic inflammatory disease; tissue regeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The specification describes cyclopeptides, which contain a peptide (ABB77919) which is based on a partial sequence of vascular endothelial sprowth factor (VEGP). The arginine and glycine residues of ABB77919 are preferably linked by a chain of one or more compounds selected from natural or synthetic amino acids and organic compounds have a carboxy
                                                                                                                                                                                                                                                                                                  Gaps

The arginine and glycine residues of ABB77919 are preferably linked by a chain of one or more compounds selected from natural or synthetic amino acids and organic compounds have a carboxy group and an optionally substituted amino group. The cyclopeptides of the invention have high affinity for the KDR receptor of VEGE. The cyclopeptides mediate in angiogenesis by bonding to the KDR receptor of VEGF, and can be used to inhibit or promote angiogenesis. Inhibition of angiogenesis is potentially useful in combating tumour growth, metastasis development, ischaemia, vascular eye diseases and chronic inflammatory diseases; and promotion of angiogenesis is potentially useful in promoting tissue regeneration and colonization of implanted biomaterials
group and an optionally substituted amino group. The cyclopeptides of the invention have high affinity for the KDR receptor of VEGF. The cyclopeptides mediate in angiogenesis by bonding to the KDR receptor of VEGF, and can be used to inhibit or promote angiogenesis. Inhibition of angiogenesis is potentially useful in combating tumour growth, metastasis development, ischaemia, vascular eye diseases and chronic inflammatory diseases; and promotion of angiogenesis is potentially useful in promoting tissue regeneration and colonization of implanted biomaterials such as bone substitutes. The present sequence represents a peptide, which is also base don VEGF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New cyclopeptides containing heptapeptide moiety acting as ligand for the KDR receptor of vascular endothelial growth factor (VEGF), useful, optionally in supported form, as angiogenesis inhibitors or activators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cyclopeptide; vascular endothelial growth factor; VEGF; KDR receptor; angiogenesis; tumour growth; metastasis development; ischaemia; vascular eye disease; chronic inflammatory disease; tissue regeneration.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Regions of the alpha-helix in each of the Zif268 zinc fingers 1, 2 and 3 were randomised and selected for binding to particular conserved target sequences in HIV-1. In finger 2, the randomised residues were at positions -2,-1,1,2,3 and 4 in the alpha-helical region. The present sequence has affinity for the TGG target sequence. Zinc finger proteins are useful for suppressing transcription and therefore for treating proliferative disorders

ö AAW84422-41 represent the peptides obtained from randomised finger 2 sequences of zinc finger nucleotide-binding proteins that bind to HIV-1 target sequences. The peptides were produced in the course of the invention. The specification describes zinc finger nucleotide-binding protein variants with at least two zinc finger modules that bind to a protein variants with at least two zinc finger modules that bind to a protein, and compositions containing them, are used to increase or reduce transcription of a gene linked to the cellular nucleotide equence. The proteins are used specifically for treating or preventing those induced by viruses), particularly where expressed from nucleic acid by gene therapy (including ex vivo methods). Typical diseases that can be treated are many forms of cancer, psoriasis, pemphigus vulgaris, Bechet's syndrome and libid histiocytosis, also treatment of human immune deficiency virus (HIV) and other viral infections, and production of transgenic plants resistant to bacterial and viral diseases. The present oligonucleotide is used in the course of the invention 55.8%; Score 24; DB 2; Length 6; Query Match

Sicheri Stapleton D,

WPI; 2000-442645/38.

3-D structure of sterile alpha motif domain used as model for determining 3-D structures of additional native or mutated SAM domain with unknown structure and structures of co-crystals of SAM domain with modulators.

Claim 24; Page 48; 72pp; English.

Commain function, and to potential modulators of SAM domain function. The surface receptors, cytoplasmic signalling proteins, transcription. The surface receptors, cytoplasmic signalling proteins, transcriptional activators and represents and chimeric human oncoproteins. For example it ranscription factor TEL, members of the polycomb group of transcriptional represence (e.g., RASES, Scm), the protein Kinase Byrzp transcriptional represence (e.g., RASES, Scm), the protein Kinase Byrzp and liprin scaffolding proteins. SAM domains are therefore thought to play an important role in both normal and oncogenic signal transduction. The X-ray crystal structure was determined for the SAM domain of the curve experience was determined for the SAM domain of the commune ephtha, the SAM domain corresponds to residues 890-861, Cek8, Hek8, and Tyrol). The SAM domain corresponds to residues 890-861, Cek8, Hek8, and Tyrol). The SAM domain-containing proteins. The SAM domain-containing and to modulate associated with aberrant T-cell signalling, and to modulate tellomer function. Modulators of SAM domain function may be used to treat disorders associated with inappropriate activity of a protein containing a cell proliferative disorder soner, atherosolarosis, arthritis and classes associated with the nervous system, and may be used to modulate anglogenesis. The SAM domain peptides and modulators may be used to modulate anglogenesis. The SAM domain peptides and modulators may be used to modulate anglogenesis. The SAM domain peptides and modulators may be used to modulate anglogenesis. The SAM domain peptides and modulators may be used to modulate anglogenesis. The SAM domain peptides and modulators may be used to the nervous special activity of an Eproper.

Cell, particularly in pathways involved in neuronal development, asconal migration, pathfinding and r The invention relates to the three dimensional stucture of a SAM (sterile alpha motif) domain, to peptides (AAB14420-B14525) which mediate SAM domain function, and to potential modulators of SAM domain function. The 814525 represent peptides which mediate SAM domain function

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to an amino acid peptide believed to be cytostatic in its action used as tumour cell growth inhibitor and a transcription factor E2F inhibitor. The peptides can be used for inhibiting tumour cell growth and the activity of transcription factor E2F. The compounds inhibit the transcription factor E2F produced by the phosphorylation of the tumour suppressor pack game by cyclin/CDK activities, and the subsequent cell duplication. The present sequence represents a clone from the random peptide library, present in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Composition useful for inhibiting of tumor cell growth comprises an amino acid peptide or its derivative.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

```
This sequence represents a peptide of the invention, and is a derivative of the HJ loop of a serine/threonine kinase (STK). The peptides can be used for the treatment of disorders caused by overactivity or used for the treatment of disorders caused by overactivity or an experiment of seases (e.g. disorders), haemorrhagic shock, cardiovascular diseases (e.g. thrombosis, atherosclerosis, arteriosclerosis, cardiac hyper trophy, ischaemia, reperfusion injury and hypertension), immunosuppressive and inflammatory disorders (e.g. asthma, psoriaats, systemic lupus erythemactosus, diabetes mellitus, suppression of organ transplant rejection, multiple sclerosis, inflammatory bowel cisease and AlDS), central nervous system diseases (e.g. Alzheimer's disease, stroke and trauma), septic shock, Parkinson's disease or hypertension. The peptides can also be used to produce antibodies which intracellular distribution of the STK and to study the intracellular distribution of the STK in addition, the peptides can be used to identify and quantitate ligands which bind the HJ loop of the STK from which the peptide was derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New peptide derivatives for modulating protein tyrosine kinase activity comprise a sequence corresponding to the HJ loop of a protein tyrosine kinase, used for treating cancers or immune disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method for determination of the amino acid sequence of an unknown peptide. The method comprises (a) determining the molecular mass and an experimental fragmentation spectrum for the peptide; (b) comparing the experimental fragmentation spectrum of the unknown peptide with a theoretical fragmentation spectrum of the unknown peptide with a theoretical fragmentation spectrum of the unknown peptide in the library with a theoretical fragmentation spectrum of the unknown peptide; and (c) identifying a peptide in the library with a theoretical fragmentation spectrum of the unknown peptide. The method is useful in DNA cloning, anti-body production, identification of recombinant products, and the study of post-translational modifications. It allows the sequence of unknown peptides or proteins with no sub-sequence identity, to be characterised using mass spectrometry. Sequences AAW87101 to AAW87364 represent a library of linear peptides constructed to exemplify the method. The isoleucine residue in these peptides to be included in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide sequence determination used in e.g. DNA cloning - by comparing mass spectra of the unknown peptide with a library of linear chain known
